VITA-PROSTA-HPX

Hypoxis extract for protecting and maintaining
the functioning of the prostate

NUTRITIONAL SUPPLEMENTS

The prostate is probably the most celebrated and yet the least discussed organ in males. However, research has shown that every man over the age of 40 suffers to some degree from an enlarged prostate. This non-dangerous growth of the normal prostate tissue is a natural result of aging. Many men have various prostate-related problems as they get older: difficult and painful urination, getting out of bed regularly at night and a weak urine stream in spite of the strong urge to urinate.

VITA-PROSTA-HPX is probably one of the most effective preparations for maintaining a healthy prostate. It provides unique protection against prostate enlargement and contains sitosterol and sterolin extracts (among other ingredients), which are extracted from the Hypoxis Rooperi plant. These extracts are known for their ability to heal prostate problems. Clinical tests have shown that these vegetal fatty substances have qualities that significantly inhibit inflammations and therefore have a preventive effect in inflammations, diabetes and cancer. These substances have remarkable features, they modulate the functioning of our defence system and combat attacks on our immune system as well as on normal healthy cells.

VITA-PROSTA-HPX strong reduced prostate problems and improves the quality of life.

In 1969, the scientist, Dr. Liedenberg, was the first to attribute the superb qualities of Hypoxis in:

- Treating prostate enlargement
- Treating malignant cell growth in the prostate
- Healing inflammations
- Cases of stabbing pain while urinating
- In cases bladder infections
- Stimulating the development of new cells
- Improving the resistance level of the prostate

Composition per tablet of 500 mg

Hypoxis Rooperi extract (Radix)	450 mg
Gummi Arabiatica (additive)	50 mg

Energy value	307 KJ	per 100 g
	72 kcal	per 100 g
Proteins	4,62 g	per 100 g
Carbohydrates	11,31 g	per 100 g
of which are sugars	3,53 g	per 100 g
Fat	0,97 g	per 100 g
Nutritional fibres	7,78 g	per 100 g
